Botswana Power Base Station Planning

Overview

Why is Botswana building a new 615 MW power station?

Botswana is contemplating building a new 615 MW coal -fired power station near its main generation plant to mitigate generation challenges at the facility. The 600 MW, coal -fired Morupule B power station has never operated at full capacity since construction in 2012 due to frequent breakdowns and is currently undergoing maintenance.

How is the Botswana Power sector map presented?

The map is presented as a PDF file using eps graphics, meaning that there is no loss of resolution as the file is enlarged. Don't have an account?

Revised in April 2025, this map provides a detailed view of the power sector in Botswana.

What are the different types of power generation sites?

The locations of power generation facilities that are operating, under construction or planned are shown by type – including liquid fuels, gas and liquid fuels, coal, hybrid, hydroelectricity and solar. Generation sites are marked with different sized circles to show sites of 1-9MW, 10-99MW, 100-499MW and 500MW and above.
