# Building communication base stations and inverters in rural areas

## Overview

---

How can managed service providers improve rural connectivity?

Managed service providers, such as those supported through the GSMA Innovation Fund for Rural Connectivity, can successfully bring together different innovations. If scaled, they have the potential to reduce the TCO of providing connectivity in rural areas and to expand rural connectivity.

What is connecting rural areas?

Connecting rural areas is a collaborative effort requiring the participation of all stakeholders to make it successful and scalable, including MNOs, governments, service providers and investors.

How can we reduce the complexity of rural sites?

Minimising the complexity of rural sites by implementing simple, repeatable and predictable site deployments; standardising the necessary equipment where relevant; and streamlining deployment processes, all of which help to reduce the cost and time of site deployment while also ensuring the quality of construction and installation is consistent.
