East Timor computer room UPS uninterruptible power supply

Overview

What is uninterruptible power supply (UPS)?

For instance, when designing server rooms, they require uninterruptible power supply (UPS) systems that deliver complete power protection for critical IT applications. These components must also be able to accommodate growth and expansion while maintaining cost-effective performance.

What is a server room UPS system?

In most cases server room UPS systems will be of the online double conversion type, although line-interactive UPS can also be used in certain rackmount applications. As computing requirements grow, so will a server room's power requirements.

What is a Liebert ITA2 online UPS?

The Liebert ITA2 online UPS offers economical, efficient and reliable three-phase power for critical loads under 10kVA in rackmount or tower configurations. This intelligent UPS offers scalable battery runtimes, output distribution options, a high power factor and an optional maintenance bypass cabinet. It is easy to install and operate.

What is a Liebert EXS ups?

The Liebert EXS UPS delivers simplicity, reliability and efficiency in a compact three-phase power solution. The integrated design and reduced footprint provide maximum power capacity. Robust availability is ensured from the integrated maintenance bypass and advanced monitoring capabilities.

What is a Liebert APS ups?

A flexible, scalable, modular power solution for room or row-based applications, the single-phase Liebert APS is available in capacities from 5 to 20kVA. Liebert APS UPS provides mission-critical availability while reducing operating and energy costs.

Why do server rooms have dual redundant power supplies?

Some server rooms will also have dual redundant power supplies to achieve the highest levels of reliability and availability. Under this type of design, each load receives power from two independent power sources, either of which is capable of supporting the entire system in the event of a single power failure.
