Energy storage projects to be put into operation in 2025

Overview

Is energy storage on track for a record year in 2025?

The global energy storage sector is on track for another record year in 2025 as utility-scale projects expand into new regions. BloombergNEF (BNEF) forecasts that developers will add 94 gigawatts (247 gigawatt-hours) of battery capacity this year, a 35% increase over 2024 and the highest annual total to date (excluding pumped hydro).

How big will energy storage be in 2025?

BloombergNEF forecasts a record 94 GW (247 GWh) of utility-scale storage in 2025—a 35% rise—driven by China's storage mandates. US tariffs, policy shifts and LFP dominance will drive growth to 220 GW/972 GWh by 2035. The global energy storage sector is on track for another record year in 2025 as utility-scale projects expand into new regions.

What solar projects are coming to the power grid in 2025?

This year, massive solar farms, offshore wind turbines, and grid-scale energy storage systems will join the power grid. Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the world's largest storage-plus-solar project.

How many battery projects will come online by 2025?

Last year, the EIA estimated that developers would bring more than 300 utility-scale battery projects online by 2025 (9 GW). Among the biggest developments is Arizona's Papago Storage, the state's largest standalone storage project with 1.2 GWh of capacity. The site will come online in 2025, featuring e-Storage's SolBank battery storage system.

How many solar projects will come online in 2025?

worldwide in 2025, representing several gigawatts of new capacity. The Oasis de Atacama in Chile will be the world’s largest storage-plus-solar project. Video used courtesy of Grenergy.

Will commercial storage overtake residential storage by 2030?

Globally, commercial deployments are forecast to overtake residential by 2030 as solar-plus-storage attachment rates rise. Lithium iron phosphate (LFP) continues to dominate stationary storage, supported by Chinese manufacturers such as CATL, BYD and EVE Energy.

Energy storage projects to be put into operation in 2025

Installed Capacity Reaches 168 GWh with 130% Growth: ...

Jan 24, 2025 · New energy storage stations are increasingly centralized and large-scale. By the end of 2024, projects with an installed capacity of 100 MW or more accounted for 62.3%, up by ...

2025 Major Energy Storage Projects in China: Key Trends

Mar 13, 2021 · Look no further than its 2025 energy storage projects, where policy tailwinds, tech breakthroughs, and gigawatt-scale deployments are rewriting the rules of the game. With over ...

Sinopec Energy Storage and Battery Initiatives for 2025: Key Projects

Jun 13, 2025 · With over 1,000 gas stations and an impressive 10,000+ charging and battery swapping stations already in operation by March 2025, Sinopec is laying the groundwork for a ...
