Greek RV Energy Storage Power Supply

Overview

Will Greece install 900 MW of storage by 2030?

According to the Greek National Energy and Climate Plan (NECP), the nation aims to install 4.3 GW of storage by 2030. Thus far, 900 MW has been allocated via the Greek Regulatory Authority for Energy, Waste, and Water (RAAEY) tenders. Therefore, the remaining share would be delivered under the new plan but without any subsidy support.

Which countries are getting a new battery energy storage system?

Greece is getting four new battery energy storage systems (BESS) amounting to 105 MWh, while Germany's Intilion will develop 65 MWh for Switzerland's Primeo Energie. The UK's first transmission-connected co-located solar and BESS facility has contracted a new asset manager.

Will large battery storage systems help stabilize the electricity grid?

For this reason, large battery storage systems will play an increasingly important role in stabilizing the electricity grid in the future", said Frederik Süllwald, Head of Global Sales & Key Account Management at Intilion.
