What is a battery energy storage system (BESS) & an uninterruptible power supply (UPS)?

Figure 1: A simplified project single line showing both a battery energy storage system (BESS) and an uninterruptible power supply (UPS). The UPS only feeds critical loads, never losing power.

What is an uninterruptible power supply (UPS) system?

Courtesy: Affiliated Engineers Inc. Uninterruptible power supply (UPS) systems have been a familiar presence for years, known for their ability to enhance power quality and offer continuous power for critical loads. These systems typically supply power for a few minutes while the generator starts up.

What is the difference between Bess and ups?

UPS is focused on providing immediate, short-term power backup during interruptions, ensuring continuous operation of critical systems for a limited duration. BESS is designed for long-term energy storage and management, supporting renewable energy integration and providing power over extended periods.

What is a Bess container system?

A functioning BESS container system or installation also consists of the following: BESS controller: This system oversight runs power allocation, manages charging, and has operational oversight and safety control. Structural frameworks and enclosures: Used for housing and retaining battery modules.

What type of battery does a Bess system use?

BESS systems can use a variety of battery types with relative advantages and disadvantages that are worth considering. For example, Lithium Iron Phosphate (LFP) batteries offer longer term deep cycle durability than Lithium

polymer (LiPo) and they are resistant to dendrite growth so they pose no fire risk.
