# High quality lfp powerstation in Brisbane

## Overview

---

Can Australia start an LFP battery operation?

“With Australia’s significant lithium production base and the emerging global trend towards adopting LFP battery technology, the opportunity to establish an LFP battery operation in Australia is substantial,” Centrex managing director and chief executive officer Robert Mencil said.

What does LFP stand for?

Lithium Australia has developed proprietary technology to produce cathode powders, including lithium ferro phosphate (LFP) and lithium manganese ferro phosphate (LMFP). As phosphoric acid is a key ingredient in LFP and LMFP, Ardmare will be in a prime position to supply the component to the plant.

Why should you buy a LiFePO<sub>4</sub> power station?

EcoFlow’s LiFePO<sub>4</sub>-equipped portable power stations and Power Kits maintain over 80% storage capacity even after 3000 cycles, offering reliability trip after trip. The added convenience of EcoFlow smartphone app control allows for easy management of your power needs, helping ensure you make the most of your family time outdoors.

Who owns LFP batteries?

Established in 1999, acquired in 2018 as wholly owned subsidiary of Livium. Capacity to produce 2 tpa of material with 8 employees. Global demand for LFP batteries is rising. In 2022, LFP batteries held a 26% market share, with predictions indicating growth to 48% by 2033.

Will lithium Australia build a battery supply chain in Australia?

“The MOU between Lithium Australia and Centrex highlights our commitment to building a battery supply chain domestically in Australia, which can provide global battery manufacturers an alternative supply source for LFP and LMFP,” Lithium Australia managing director and chief executive officer Simon Linge

said.

Will agriflex produce phosphoric acid in Queensland?

Agriflex will conduct a study to produce phosphoric acid in Queensland and will provide Lithium Australia with phosphate product specifications.
