

SolarInnovate Energy Solutions

Home use on-site energy solar energy

Overview

How can a solar power system save you money?

Use solar power to save you money and reduce your carbon footprint. The most common on-site renewable energy systems are solar-powered. Solar setups convert light energy from the sun into electrical current. They can be installed in sun-facing areas such as rooftops, external walls or parking lots.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Can a solar power system run a home 24/7?

Yes, a well-designed solar power system can run a home 24/7, but it requires battery storage and smart energy management. Since solar panels generate electricity only during the day, a reliable backup solution is necessary for nighttime and cloudy days.

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as “behind-the-meter” (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Why should you install a solar system?

Installing a solar system not only cuts down monthly electricity bills but also offers energy independence. With advancements in solar technology, homeowners can now store excess energy in battery systems, ensuring

uninterrupted power supply even during cloudy days or nighttime.

Who owns a solar energy system?

The system can be on- or off-site and may be owned by utilities, a solar developer, non-profit entities, or multiple community members. Learn more about community and shared solar. If you lease a solar energy system, you are able to use the power it produces, but someone else—a third party—owns the PV system equipment.
