# How many energy storage power stations are there in Denmark

## Overview

---

In our last post of our blog series about energy storage in Europe we focused on Italy. Now we move back north, to Denmark. Unsurprisingly, Denmark is known as a pioneer.

Regardless of which energy policy scenario Denmark decides to pursue, energy storage will be a central aspect of a successful energy transition. There are currently three EES facilities operating in Denmark, all of which are electro-chemical (batteries). A fourth.

The energy storage market in Denmark will be most primed for growth should policy follow the Hydrogen Scenario, where massive.

There are currently three EES facilities operating in Denmark, all of which are electro-chemical (batteries). Where can I find current electricity prices in Denmark?

Green Power Denmark shows current electricity prices as well as solar and wind's share of Danish energy production. The figures originate from Energinet's Energy Data Portal. At Drivkraft Danmark, you can find both current prices and the historic price trend from 1970 onwards for e.g. petrol, diesel fuel for motor vehicles and oil.

Where can I find information about energy in Denmark?

On the Danish Energy Agency's website, you can find statistics and key figures on the subject of energy, e.g. energy prices.

Where can I find information about charging stations in Denmark?

The Ministry of Transport often publishes information and news about charging stations Ladeinfrastruktur og opladelige biler (in Danish). How many wind turbines do we have in Denmark?

The Danish Energy Agency's register (in Danish) contains information on the location, size and production of all Danish wind power plants.

What is the energy system like in Denmark?

Since 1976, the Danish energy system has seen a large shift to cogeneration, renewable sources of energy, and energy-efficiency, supported by a political economy of democratic inclusion in decentralized energy planning and a cultural sensitivity to the social and environmental costs of using fossil fuels ( Hvelplund, 2014 ).

Can a hydrogen-based energy storage system be used in Denmark?

Bulk physical storage of renewable energy produced gases can act as a longer-term storage solution (hours, days, weeks, months) to help maintain flexibility in a fossil-free energy grid (The Danish Partnership for Hydrogen and Fuel Cells). Without the hydrogen scenario, the potential for hydrogen-based energy storage in Denmark will be limited.

Who regulates energy prices in Denmark?

For questions on energy prices, the Danish Energy Agency generally refers to Forsyningstilsynet /the Danish Utility Regulator (DUR), since DUR regulates the utility companies supplying electricity, natural gas and district heating, and DUR also approves prices, profits and pricing methods.

### **The need for charge points for electric vehicles will rise**

Dec 2, 2022 · If Denmark is to reach the goal of one million electric vehicles on the roads in 2030, the number of charging stations will have to keep up. DTU has created a calculation tool that
