# How to install two new energy battery cabinets

## Overview

---

How do you reinstall a battery cabinet?

Reinstall the left side panel on the left-most battery cabinet after interconnection. Push the third battery cabinet into position, align with the seismic anchoring (if any), level the battery cabinet, and interconnect with the other battery cabinets as described in step 2, step 3, and step 5.

How do you level a battery cabinet?

Remove the side panels that are adjacent to the other battery cabinets. Push the right-most battery cabinet into position. For seismic anchoring, ensure that the rear seismic bracket connects to the rear anchors. Lower the levelling feet until they connect with the floor - use a bubble-leveler to ensure that the cabinet is level.

Do you need a combiner box for a solar-plus-storage system?

While smaller solar-plus-storage systems, those with one or two battery cabinets and one inverter, do not typically require a combiner box, larger systems, particularly those with more than four cabinets and more than three inverters, need a combiner box to connect all of the devices together.

How do I choose a battery combiner box?

When deciding between using a commercially available battery combiner box or a 'do-it-yourself' box built from off-the-shelf parts, it is important to choose the solution that best suits each project. For many installers, the easiest option is to use an inverter-specific battery combiner box.
