Is it safe to put the Asian outdoor power supply in the car temperature

Overview

Is 95 degrees outside a car a safe temperature?

Bonus points if you could describe the safety mechanism (s) that are typically employed to protect against this. It may help me understand the risks better. At 95 degrees outside a car will get to be 140 degrees inside in 1 hour. So no. @Passerby: It's not that straightforward is it?

They call the 140 degrees an "operating temperature".

Can a car battery catch fire at high temperatures?

At high temperatures, power banks can become compromised, and their lithium-ion batteries contained within their enclosure may catch fire if you're unlucky. We know this has happened before in 2016. Our advice is to use the car's USB ports for device charging if you have a newer vehicle.

Can a car run at 95 degrees outside?

At 95 degrees outside a car will get to be 140 degrees inside in 1 hour. So no. @Passerby: It's not that straightforward is it?

They call the 140 degrees an "operating temperature". What if I don't operate it at that temperature?

etc. go into thermal runaway at about 60°C I found one.

Can you leave tampons in a hot car?

The point is: Don't leave tampons in a hot car. That said, it almost certainly takes more than one or two days in a hot car to ruin an unopened pack of tampons. If you're worried about the bag you forgot in the car earlier this week, don't. If you've been doing this for a while, we have some bad news.

Should you leave a power bank on in your car?

Smartphones are essential in today's face-paced and connected world, and power banks have become very popular accessories for smart phone users. They extend the life of the phone's battery and can be extremely useful in emergencies. However, it's important not to leave on in your car, no matter the circumstance.
