

## SolarInnovate Energy Solutions

# Kosovo outdoor wind power base station manufacturer

## Overview

---

What is the largest wind farm in Kosovo?

The project was implemented by SOWI Kosovo llc. ([sowikosovo.com](http://sowikosovo.com)) and has since been taken over by the investor Enlight Energy ([enlightenergy.co.il](http://enlightenergy.co.il)). Windfarm in the Mountains at Altitude of 1800 Meters The 27 wind turbines of type GE 3.8 - 137 (hub height 110 meters) have a capacity of 102.6 MW and are by far the largest wind farm in Kosovo.

When will Notus wind farm start in Kosovo?

We also experienced exceptional support from the German embassy in Pristina during implementation in Kosovo," explains NOTUS energy Managing Director Röger. In accordance with the regulations in Kosovo, official operation of the wind farm is scheduled to begin on November 30, 2021, after the trial operation phase that has already started.

How does Notus energy work in Kosovo?

Kosovo has relied almost exclusively on coal-fired power generation and electricity imports. Together with local partners, NOTUS energy carried out the permit planning, supported the financing and implemented the project as general contractor. This includes cooperation with the authorities and the transmission system operator.

Who is air energy Kitka WPP?

AIR ENERGY Kitka WPP is a subsidiary of Güriş Construction and Engineering Co Inc. founded in 2008. How It Works?

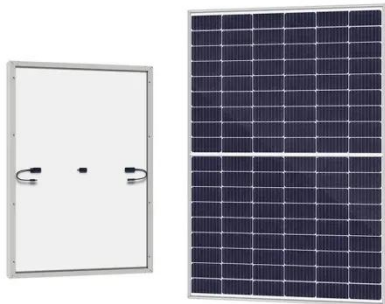

Wind power is energy that's generated by harnessing the power of the wind through wind turbines.

Where did Notus energy build a 120 MW substation?

At the site near the village of Bajgora, NOTUS energy built a 120 MW

substation to transform the wind farm's electricity to the 110 kV level. The substation is located at an altitude of 1,500 meters. From there, NOTUS energy built a 20-kilometer 110 kV overhead line to the feed-in point in the town of Vushtrria.
