# **Ministry of Industry and Information Technology s communication base station lithium-ion battery construction standards**

## Overview

---

On November 15, 2024, the Ministry of Industry and Information Technology (MIIT) of China, jointly with the Ministry of Ecology and Environment (MEE), the Ministry of Emergency Management (MEM) and the State Administration for Market Regulation (SAMR), publicized the full text of the Guidelines on the Comprehensive Construction of the Standards System for Lithium-ion Battery Industry (hereinafter referred to as “the Guideline”). What's new in China's Lithium-ion battery industry?

BEIJING, June 19 -- China's Ministry of Industry and Information Technology on Wednesday unveiled revised guidelines for the lithium-ion battery industry to further strengthen standardized management and promote the high-quality development of the sector.

What are lithium-ion batteries & battery management standards?

These standards have been selected because they pertain to lithium-ion Batteries and Battery Management in stationary applications, including uninterruptible power supply (UPS), rural electrification, and solar photovoltaic (PV) systems. These standards should be referenced when procuring and evaluating equipment and professional services.

How much power does a lithium ion battery produce?

In the lithium-ion battery segment, the output of batteries for energy storage exceeds 9GWh, and the installed capacity of batteries for EVs is about 30GWh. The output of cathode materials, anode materials, separators, and electrolytes reached 235,000 tons, 140,000 tons, 1.75 billion square meters, and 105,000 tons respectively.
