Mozambique 5G base station power supply upgraded again

Overview

What is 5G power supply?

The development of 5G networks brings new challenges for powering base stations. MPS has developed a powerful new power supply solution for 5G telecom applications that ensures stable and efficient power delivery, accurate current sensing, and highly efficient power factor correction to maintain a stable output voltage amid large load variations.

Which MP's products are best for 5G?

Several innovative, high-performance MPS products, including the MPF32010, MCS180x family, MP18831, MPF32020, MP023 and MPQ27800 New 5G networks bring new challenges for powering base stations. MPS has developed a powerful, efficient new power supply solution for 5G telecom applications using several innovative products.

How does 5G affect network power supply requirements?

With the advent of 5G, network power supply requirements are changing. 5G equipment is sensitive to the quality of the electricity supply and must operate in a broad variety of environments, both indoors and out. 5G changes this dynamic by allowing mobile cores and core routers to flip rapidly between active and idle states.

How does a 5G base station reduce OPEX?

This technique reduces opex by putting a base station into a "sleep mode," with only the essentials remaining powered on. Pulse power leverages 5G base stations' ability to analyze traffic loads. In 4G, radios are always on, even when traffic levels don't warrant it, such as transmitting reference signals to detect users in the middle of the night.

What is a 5G backhaul power supply?

The backhaul part of the 5G network connects the access interface - including

masts, eNodeB, and cell site gateway - to the mobile core and internet beyond. And just like the access equipment, it too has specific power supply requirements. Backhaul power supplies must cater to aggregation routers and core routers.

Does FSP offer a 5G power supply?

FSP's power supply products meet the quality demands of agents in the telecoms industry. We continue this discussion of 5G power supply design considerations in part II. In this next part, we will cover power supply considerations for the core of the 5G network, plus for internet- and cloud-connected devices (such as servers).
