

SolarInnovate Energy Solutions

Panama Professional RV Solar System

Overview

Do solar panels work if it rains a lot?

Normally, never a problem as the panels bring us back up to 100% around midday. However, during the rainy season you may have consecutive days with little or no sunshine. This year we had almost a week of rain and cloud and for the first time our 4 panels system never fully charged our batteries.

How much does a solar panel cost?

The panels cost \$345 each and the batteries are \$349 each. The 60 amps controller cost \$670, the INVERTER about \$400 Note: we did use other American made batteries that were cheaper – but eventually they all failed. Also, there are cheaper panels but the ones we buy have a 20 year guarantee.

How do solar panels work?

Solar panels are covered with photovoltaic cells. When sunlight hits these cells the photons of sunlight are converted into electricity. This is direct current electricity (DC) the same as you would get from a 9 volt battery.
