Planning for a new energy storage base in St George has been finalized

Overview

When will new energy storage development be introduced?

The commission said earlier it will introduce a plan for new energy storage development for 2021-25 and beyond, while local energy authorities should also make plans for the scale and project layout of new energy storage systems in their regions.

Will St George get more power from renewables in 2021?

Under long-term projections shared with city leaders last week, St. George would go from getting 3.4% of its power from renewables in 2021 to 27.2% by 2030. Over the same period, the plan is to go from 28.1% coal to 12.8%.

Is St George a good place for solar energy?

With the city planning on using less coal and more renewable energy, a major focus is the expansion of solar energy in and around St. George, according to Mangum. In the newly released Utah Energy and Innovation Plan , the sunny southwest corner of the state is promoted as a prime spot for continued solar development.

Why are energy storage facilities important?

"Energy storage facilities are vital for promoting green energy transition with substantial potential, as the central government calls for a new energy-based power system," said Wei Hanyang, a power market analyst at research firm BloombergNEF.

Does St George have electricity?

St. George supplies the majority of its residents with power, but most residents and businesses south of the Virgin River receive their electricity from Dixie Power, a separate energy cooperative. Both utilities are forecasting fast-paced increases in demand.

Will solar go down in St George?

“Solar is going to come on at a certain time and it's going to go down at a certain time,” Mangum said, suggesting the city will also need to have other sources in its mix. Mangum says the current makeup of rooftop solar in St. George can provide about four megawatts of energy during peak hours.
