

SolarInnovate Energy Solutions

Switzerland Zurich farm installs solar air conditioning

Overview

Can solar energy be used in Switzerland?

Although the proportion of solar heat to overall consumption in Switzerland is still relatively low, its potential is considerable. If all existing buildings were to be optimally improved in terms of energy efficiency, it would be possible to meet the heating requirements of all Switzerland's households through the use of solar collectors.

Could agrivoltaics supply more electricity than Switzerland needs?

Agrivoltaics could supply five times more electricity than Switzerland needs. ZHAW researchers now intend to investigate the impact on plant growth. Grain and vegetable fields, pastures and orchards offer huge areas that, in addition to food, could also be used to produce electricity.

What is a solar thermal facility?

A solar thermal facility can be ideally combined with any other type of heating system using renewable energy, including wood burners, heat pumps and district heat supply. Furthermore, a solar thermal facility can be used for a variety of applications which require a heat source, both in private households and in the services and industry sectors.

Can a solar thermal system produce hot water and auxiliary heating?

The utilisation of solar heat with the aid of a solar thermal system is also an attractive option for producing hot water and auxiliary heating. A solar thermal facility can be ideally combined with any other type of heating system using renewable energy, including wood burners, heat pumps and district heat supply.
