

## SolarInnovate Energy Solutions

**The number of UPS battery cabinets cannot be an odd number**

## Overview

---

How many batteries can a ups5000-e use?

When the UPS5000-E works with the SmartLi, its half-wave loading capacity is 5% of the SmartLi rated capacity (standard configuration). A maximum of two battery groups and up to four battery cabinets (in the 2N scenario) can be deployed inside the smart module.

How many ups can a 2n system have?

Each UPS system with a 2N configuration can have two or three UPS groups. If there are two groups, both must be connected to the same load. If there are three groups, then there are three separate loads and each group is connected to two of the loads.

Does ups have redundancy?

There is no redundancy, except optionally to the second power supply of each piece of equipment. Each UPS system with an N configuration can have multiple UPS groups, where each group is connected to a different load. The number of modules within each UPS group can be different.

Do all ups have the same kW rating?

Within each group, all UPS modules must have the same derated nameplate rating value (kW). The N+1 system configuration is for one or more UPS modules that work together to supply power to the IT load. There is simple module redundancy in that one of the modules can be rendered inoperative or be taken off-line.

How many groups can a 2 (n+1) UPS system have?

Each UPS system with a 2 (N+1) configuration can have two or three UPS groups. If there are two groups, both must be connected to the same load. If there are three groups, then there are three separate loads and each group is connected to two of the loads.

Does ups shunt a Battery breaker?

c. Remote trip of the battery cabinet breaker: note that the UPS does NOT generate the shunt trip command for battery breakers. (a UPS “load off” or UPS EPO command will shut off the UPS but will not trip the battery breakers in the Samsung cabinets).
