What are the types of base station power supplies

Overview

What are the components of base station?

A base station in digital communication consists of two main components: the transceiver and the controller. The transceiver manages the radio-link protocols, while the controller serves as the connection between the station and the switching centre.

What are the main types of base stations?

There are three main types of base stations, each with a specific purpose. The Macrocell is the largest type and provides the main coverage for mobile phone networks. The Microcell is used to improve capacity in areas where demand to make calls is high, such as shopping centers.

What are the different types of power stations?

IS: 4410 (Part10)-1988 differentiates between the following types of power stations: 1. Surface power station or over ground power station: A power station which is constructed over the ground with necessary open excavation for foundations. Typical examples may be seen from Figs. 7, 11 or 12. 2.
