Overview

What is a batteryguard lithium-ion fire resistant battery cabinet?

The Batteryguard lithium-ion fire resistant battery cabinet offers the solution against battery fires thanks to a solid fire-resistant construction. An EN 15659 LFS60P-certified cabinet with fire-resistant properties is used as the basis. In these cabinets you can safely store and simultaneously charge (bicycle) batteries.

Why is my batteryguard Battery Cabinet not working?

Damage inside the battery can be caused by dropping the battery or bumping it against something. This damage will not be visible on the outside. For additional safety, you can equip your Batteryguard battery cabinet with an automatic fire suppression system.

Which accumulator batteries are included in the cabinets covered by the technical specification?

The cabinets covered by the technical specification have been designed to contain the hermetic lead-acid electric accumulator batteries.

Are lithium-ion batteries a fire hazard?

The use of these lithium-ion batteries is not without risk. More and more often, reports are appearing in the media that fire and damage have occurred when charging these risky (bicycle) batteries. The problem is that you cannot tell from the outside whether a battery is broken - and therefore a fire hazard.

Does Domino's have a fireproof Battery Cabinet?

After one of the Domino's branches burned down due to a battery igniting, the need for a fireproof battery cabinet became quickly apparent. Now, the batteries of the electric delivery bicycles are all safely stored away in the Batteryguard lithium-ion battery cabinet.

What happens if a battery catches fire?

However, damage or a manufacturing defect can cause a chain reaction, also known as 'thermal runaway', in which the battery catches fire and, in the worst case, can even explode. Damage inside the battery can be caused by dropping the battery or bumping it against something. This damage will not be visible on the outside.
