How do you wire a GFCI breaker?

Similar to the wiring diagram for a 1-pole GFCI circuit breaker, the built-in white wire on the back of the two-pole GFCI must be connected to the neutral bar in the main panel. The 2-pole GFCI should be installed in the two hot slots in the main panel. This configuration allows HOT 1 and HOT 2 to provide the 240V input supply to the GFCI.

What is a GFCI breaker receptacle rated at 50a 240V?

For example, the following wiring diagram shows a 2-pole GFCI breaker with three output terminals installed with a NEMA 14-50R receptacle rated at 50A, 240V, which is used for heavy-duty electric vehicle charging, mobile connectors, electric ranges, etc. Click image or open in a new tab to enlarge.

Does a high powered Wall Connector need a GFCI breaker?
